

Requirements/Tasks:

You are required to design and implement the lotto game for Lottotech Mauritius.

The player enters six numbers in the range 1 - 40.

Duplicates are not allowed, all the six numbers entered by the player are unique.

Next your program generates six unique numbers in range 1 - 40.

If there are three matching numbers, the player wins Rs 100

If there are four matching numbers, the player wins Rs 500

If there are five matching numbers, the player wins Rs 1000

If there are all six matching numbers, the player wins the jackpot of Rs 1,000,000

You must use only the chapters covered in the module:

- variables & arrays
- control structures
- methods
- use of the JOptionPane input & message dialogs

Note: No use of data file and/or database connectivity

Marking Criteria:

Criteria	Marks
Use of variables & arrays	10
Use of methods	30
Use of control structures	30
Use of input & message dialogs	10
Additional Features	10
Report	5
Viva/demo	5
Total	100

Submission:

Submission Deadline: Wed 07 Aug 2024

You must submit both the java program and the report in the google classroom section week 15.

Do not submit/upload zip file.

Your report must contain the java code of your implemented software and screenshots.

The viva/demo/presentation schedule will be posted in the google classroom.

The assignment is graded only for student attending the presentation.

Each student will be allocated a time slot to showcase his/her lotto java app.

Few screenshots are given below to illustrate the lotto game.

Note: The assignment submission in the google classroom is automatically closed after the deadline date.

Plagiarism:

This is an individual piece of work and if found guilty of plagiarism a failure grade will be awarded.

Screenshots:-

Fig 7: player enters 6

Next the program displays the numbers entered by the player

Next the program generates six unique numbers:

The program generates a different number each time there is a duplicate. All the six numbers are unique.

Finally the program examines how many player numbers are matching with the winning numbers generated.
